

DISTRIBUTED COMPUTER MONITORING SYSTEM AND METHODS FOR AUTONOMOUS COMPUTER MANAGEMENT

ABSTRACT OF THE DISCLOSURE

Methods and systems are provided by which a flexible, efficient and easy-to-use real-time enterprise management system is provided. The methods and systems can effectively manage a wide variety of computing platforms in a fluidly changing network environment. Also provided are methods and systems which allow an individual machine to determine whether or not its current performance characteristics vary from their acceptable parameters without having to contact any other machine. Finally provided are methods and systems by which computers can analyze and store data regarding their performance characteristics in real time.
